

Use-Case Flow

Lab 1: Requirements Engineering & UML Use-Case Modelling

Freelance Content Creator Escrow Platform

Preconditions

- The milestone contract (deliverable description, due date, escrow amount) has been jointly defined and the escrow amount is funded (UC-01).
- The Content Creator has submitted the final, watermarked draft deliverable for the milestone (UC-02, UC-03).
- The Client Sponsor is authenticated and logged into the platform.

Postconditions

- Success: Milestone status = “Completed”; escrow funds are transferred to the creator's platform wallet; both parties are notified; the transaction is recorded in the audit log.
- Failure/Alternate: Milestone remains “Pending Revision” or “Disputed”; escrow funds stay locked; no funds are transferred.

Main Success Scenario

1. Client Sponsor opens the milestone review dashboard and selects the submitted draft deliverable.
2. System displays the watermarked draft to the sponsor for review.
3. Client Sponsor reviews the deliverable against the milestone's acceptance criteria.
4. Client Sponsor selects “Approve & Sign Off” and confirms with a digital signature / OTP.
5. System validates the sponsor's sign-off credentials.
6. System changes the milestone status to “Approved” and initiates an escrow release request.
7. System («include» Process Payment Transaction) sends a fund-transfer instruction to the Payment Gateway.
8. Payment Gateway authorizes and executes the transfer from escrow to the creator's wallet.
9. System updates the milestone status to “Completed” and credits the creator's visible balance.
10. System sends confirmation notifications and a digital receipt to both the Content Creator and Client Sponsor.
Use case ends successfully.

Alternate Flow — 4a. Sponsor Rejects the Draft

1. Client Sponsor selects “Request Revision” instead of approving, and enters written comments.
2. System reverts the milestone status to “Pending Revision” and keeps escrow funds locked.
3. System notifies the Content Creator with the sponsor's comments and a resubmission deadline.
4. Content Creator resubmits a revised draft; flow returns to Main Success Scenario, Step 1.
5. If the same milestone is rejected twice, the system offers to raise a dispute («extend» Raise Dispute) instead of allowing a third resubmission cycle.
